PRO DRY 5 STAGE 2 SEALED AIR INTAKE SYSTEM

aFe's Pro Dry 5 Stage 2 sealed air intake system is now available for the GM Duramax Platform. The aFe Stage 2 sealed air intake system utilizes specially designed intake tubes to maximize air velocity and improve horsepower, torque, mpg and throttle response. The durable, rotomolded plastic intake box blocks out engine heat and it installs using factory mounting locations. A built-in auxiliary air scoop is located at the bottom of the box for additional air flow.

These systems come with a black powdercoated diamond-plate cover and a massive 9-inch Pro Dry S air filter that provides maximum flow and filtration that require no oils. In recent testing, there were gains of 12 hp and 27 lb-ft of torque.

Part numbers 51-81332 (Duramax LMM), 51-80882 (Duramax LLY/LBZ), 51-80612 (Duramax LLY), 51-80782 (Duramax LMLY/LBZ) all retail price for \$289. Contact (951) 493-7155 or www.aFepower.com.

RIDE-RITE LS

Firestone's Ride-Rite LS new load adaptive shocks work as a tri-tube mono-flow shock absorber. The shock absorber is directly connected to the helper spring, allowing pressure within the air spring to automatically control performance. As a result, damping is low when the vehicle is unloaded and automatically increases to stiffer damping when the vehicle is loaded.

Ride-Rite LS features a protective urethane dust boot and double-welded loops. The easy-to-install product comes with air line and "T" fittings. It is available for the following applications: 2001-2009 Chevrolet Silverado 2500HD and 3500HD (part no. 4353); 2003-2009 Dodge Ram 2500 and 3500 (part no.4350); 1999-2009 Ford F-250 over 8500 GVWR (part no. 4351); and 1999-2009 F-350 (part no.4351).

SHO PUMP

Snow Performance's SHO Pump delivers increased pressure and improves water/methanol distribution. One of the most critical functions of any water/methanol injection system is the pump's ability to fully atomize the liquid mixture. The Super High Output (SHO) pump offers a more reliable method to maintain higher pressures and provides 20 psi more pressure than competitive pumps on the market.

It includes improved double-seals and more thermal loading capability, while drawing less current to extend the life of the pump. It can consistently maintain higher pressures for longer periods of time, making it a better choice for high duty cycle applications such as in racing or commercial truck use.
