NEW PRODUCTS

Bolted Beef

If you are looking to replace the Dumbo wings on your JK but don't want to hack and drill as is required for many fender flares, these XRC fenders might be for you. They are made from 3/4-inch cold-rolled steel and are powdercoated in a signature two-stage textured finish. They are a complete bolt-on using the included stainless steel fasteners. The side ducts are removable for easy installation of a snorkel and they provide more tire clearance than stock. A complete inner liner is included to keep mud and snow out of the engine compartment and the side plates are easily removable. Information: Smittybilt, 888/717-5797, smittybilt.com

Third

File this under the category of "Why didn't the factory think of that?" Since the four-door JK was released, we expected a third row seating option to show up. Since the factory never stepped up, TeraFlex has. This simple steel bracket allows four-door owners to bolt a two-door rear seat down in the cargo area and retain the factory fold-and-tumble feature. The bracket is CNC-cut and has a durable powdercoat finish. The seat can be mounted in either front-facing or rear-facing orientations and is removable without tools. Information: TeraFlex, 801/288-2585, teraflex.biz

Sypder-Covered Rear

This is a bumper that was never really intended for public consumption. It was originally designed for Poison Spyder's owner, Larry McRae, to provide a 60-degree departure angle with 40-inch tires. The bumper is CNC laser-cut from 3/4-inch plate steel, brake-formed for an exact fit, and offers optional 1-inch-thick plate steel shackle tabs. If you don't want the maximum clearance and departure angle possible, stay tuned, as Poison Spyder will soon have a full-featured full line of bumpers for the JK. Information: Poison Spyder Customs, 951/849-5911, poisonspyder.com

Steel Lights

These steel light boxes from Warrior Products are a strong and low-buck alternative to constantly replacing your tree-prone JK tail lights. Available blank, with one 4-inch light cutout, or with a 4-inch and 1 1/2-inch cutouts, they come powdercoated in semi-gloss black. Some minor cutting is required for fitment and the company also offers light kits and load resistors (if you opt for LED lights). Information: Warrior Products, 888/220-6861, warriorproducts.com
