Turbine Diverter Valve

BD Diesel Performance, Abbotsford, B.C., presents its Track Master Turbine Diverter Valve. Spooling up larger single race turbochargers at extreme power levels to develop adequate launching boost pressures is often difficult. Now twin volute turbine housings with a T4 mounting pad can bolt up the Track Master Turbine Diverter Valve to direct exhaust pressure into one volute, allowing the rotating assembly to spool-up to launch boost pressure quickly and easily. It comes in two turbine housing to exhaust manifold configurations, T4/T4 or T4/T3. Call (800) 887-5030 or visit www.dieselperformance.com

Super Duty Cold Air Intake

advanced FLOW engineering (aFe Power), Corona, Calif., presents its new Stage 2 cold air intake for 2011 Ford Super Duty V-8 6.7-liter applications. The systems feature a durable, one-piece 18-gauge powder-coated heat shield that blocks out engine heat and installs using factory-mounting locations. It also includes a performance-engineered rotomold plastic intake tube to maximize air velocity and improve horsepower, torque and throttle response. Included is a patented Pro-SR filter that utilizes five layers of progressive cotton media. Call (951) 493-7155 or visit www.aFepower.com

Heavy-Duty Piston

Federal-Mogul Corp., Southfield, Mich., presents the next generation of its Monosteel piston, the Magnum Monosteel. The new design reduces piston mass by up to 7 percent and includes design features that reduce friction for improved fuel economy and lower emissions. Like the original Monosteel piston, the Magnum addresses the increasing thermal, mechanical, abrasion and corrosion challenges placed on heavy-duty diesel engines resulting from stringent emissions regulations. It features a patented dual friction-welded construction. Visit www.federalmogul.com

Diesel Power Programmer

Hypertech, Bartlett, Tenn., presents its new E-CON Economy Power Programmer, available for gas and diesel engines. Designed for drivers who need better fuel mileage and more power but don't want to pay for other high-performance features, the E-CON is programmed with Hypertech's Max Energy Tuning, Diagnostics and Back to Stock options. The system comes with a USB cable and CD containing software to enable quick updates over the Internet. Simply plug it into the under-dash connector, choose a tuning program and push a button to reprogram. Call (901) 382-8888 or visit www.hypertech.com

Diesel Engine and Transmission Flush

AMSOIL Inc., Superior, Wis., presents its AMSOIL Engine and Transmission Flush, a detergent-based flush product that is formulated to improve fuel economy, operating efficiency and reduce emissions in gasoline and diesel engines, and automatic transmissions. Its potent formula cleans sludge and deposit build-up, promoting lower operating temperatures and reduced oil consumption. Detergent-based AMSOIL Engine and Transmission Flush is safe on parts and can be easily disposed of with waste oil. Call (800) 777-8491 or visit www.amsoil.com
