### >> Performance Air Filter from aFe

Available for the '10 Mustang GT is a performance high-flow air filter from aFe, and it has the magic word attached to it: more. As in, more horsepower, torque, throttle response, and MPG. Behind the scenes is a polyurethane progressive bump seal, and the filter is washable and reusable. There are two types available: the Pro 5R filter uses a deep-pleat, five-layer progressive cotton gauze media for max airflow, while the Pro Dry S has a deep-pleat two-layer synthetic media, so no special oils are needed; you can clean it with regular soap and water. An inverted design allows for more surface area.
